BEAVER84 LENDS ITS SUPPORT TO 'CHILDREN IN NEED'

Beaver 84, one of the UK's leading suppliers of non mechanical access equipment, has donated its SIG Trak ground protection mat for the Radio 2 Drivetime Magnificent Seven charity event in aid of Children in Need.

Exclusive to Beaver 84, SIG Trak was used at the charity event to create a temporary roadway for the collection of Ferraris to be parked on once they arrived at Chewton Glen Hotel in the New Forest.

Beaver 84 also donated perimeter fence panels to Middle Park Community Centre as part of a restoration project for Children in Need 2009.

Bryan Coombs, Events Manager at Beaver 84 comments: "We were delighted to support this year's Children in Need and donate our products to such a worthwhile cause."

■ Crowd Control Barriers

Key project facts

- 56 kilometres / 35 miles of site perimeter secured
- 16,000 temporary fencing panels supplied
- 3,600 crowd barriers supplied
- 30 six-metre alloy towers supplied
- One ten-metre fire tower allowing for 24-hour-a-day fire surveillance
- 170,000 music lovers

**CASE STUDY:
GLASTONBURY 2009**

In brief

Beaver 84 supplied 16,000 temporary fencing panels – over 56 kilometres for Glastonbury 2009. In addition, it supplied 3,600 crowd barriers, 30 six-metre alloy towers for crowd control and one ten-metre fire tower that allowed for 24-hour a day fire surveillance over the festival.

Project

Beaver 84 won the contract to supply the temporary fencing and crowd control barriers to Glastonbury as it provided the strongest products available on the market. Its temporary fencing panels benefit from Smartweld corner joints that are proven to be 72 per cent stronger than other versions available on the market, gained through the type of welding used on the fencing panels.

The temporary fencing and crowd control barriers supplied by Beaver 84 allowed security personnel to create impenetrable lines that acted as both physical and psychological barriers which is the key to effective and safe crowd control. These measures allowed 170,000 music lovers to attend Glastonbury 2009 in a safe and secure environment which is crucial to a safe and well-run event.

Glastonbury provided a range of security challenges and given the nature of open spaces, significant difficulties in managing crowds safely had to be overcome. Beaver 84 gave consideration to the unpredictability of external factors such as weather, behaviour of performers and differing crowd dynamics and as such, was able to provide the safest and highest quality crowd control equipment and temporary fencing to the festival organisers.

Alongside crowd control and audience safety, Glastonbury event organisers had to take into consideration the logistics of staging such a large-scale music event. In the case of Glastonbury, organisers had to prepare for limited road infrastructure in the local area.

Beaver 84 were able to expertly plan and execute the logistical operations of the delivery of the materials by adopting a just-in-time (JIT) approach that ensured delivery schedules were organised to reduce lost man-hours and guaranteeing the equipment arrived at the right time and in the correct order to ensure the installation process ran smoothly and efficiently.

Beaver 84 has been supplying temporary fencing and crowd control barriers to Glastonbury for a number of years and has a strong track record in supplying security fencing to many well-known sites.
